Worky GMR Series Automotive Workshop Fume Extractors

The Worky GMR Series of fume extractors available from Alemlube are fast becoming essential in the Automotive industry for the well being of workshop personnel and customers alike.

An increased focus by employers on a healthier working environment increases productivity and by collecting vehicle fumes at the production point (vehicle exhaust pipe), harmful gases such as carbon monoxide (CO), unburnt hydrocarbons (HC) and nitrogen dioxide (NO₂) and taking them away from the workshop atmosphere, OH&S concerns are greatly reduced.

The Worky GMR Series of fume extractors with spring rewind flexible hose extension and retraction can be fixed or with the aid of channel rails suspended from the workshop ceiling, mobile operation is possible creating far greater versatility and efficiency. Sliding elements can be manually moved along the aluminium extractor channel rail to the vehicle being serviced, without creating an obstacle or hindering work. A centralised fan will then extract the vehicle fumes leaving the workshop air free of toxic exhaust.

The GMR Series consists of models available to suit cars & light commercials, trucks & buses and motorbikes and are available with or without a fan. Model details below.

PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

Creates a pollution free workshop environment

Italian quality manufacturing

Spring rewind hose mechanism

Fixed or mobile accessibility along aluminium extractor channel rails

Available with or without a fan

High quality flexible hose and exhaust pipe nozzle

ORDERING INFORMATION

CAR FUME EXTRACTORS

GMR10010 Spring Rewind - fan not included
