201311 AdBlue® IBC Dispensing Kit

March 2022

The 201311 AdBlue® IBC Dispensing Kit is supplied complete with an air operated 1/2" diaphragm pump, automatic shutoff nozzle, inline meter, hose reel with 10m x 3/4" EPDM hose, stainless steel base with nozzle holster and 1.5 metres of suction hose.

A major benefit of investing in the 201311 AdBlue® IBC Dispensing Kit is the ability to transfer AdBlue® at higher flow rates when compressed air is available.

This all in 1 kit complete with hose reel is the ideal plug and play set up for quick and easy high flow dispensing from an AdBlue® IBC.

Both the pump and hose reel are fixed to a sturdy metal base which is installed directly onto the top of the IBC frame.

The 201311 AdBlue® IBC Dispensing Kit is easily transported for applications in the workshop, in the depot or in the field and can be relocated from one IBC to another when required.

SPECIFICATIONS, FEATURES AND BENEFITS

- 1/2" air operated diaphragm pump rated up to 45L/min free flow
- 10m x 3/4" AdBlue® hose reel
- Automatic shut off AdBlue® nozzle
