361300 4-Way Reversing Valve

The 361300 4-way Reversing Valve from Samoa facilitates filling or emptying waste oil containers on lube trucks by reversing the flow of the fluid simply by repositioning the handle and thereby requiring only one pump for filling and emptying operations.

Typically, the 361300 4-way Reversing Valve assists in transferring fluids from a supply tank to operational day tanks.

The valve is compatible with lube oils, hydraulic oil, diesel fuel, antifreeze and some chemicals.

Manufactured in anodized aluminium and acetal, the 361300 incorporates 1" BSP (f) inlets and outlets and is commonly installed to assist on lube trucks and in the construction, mining and manufacturing sectors.

PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

Simplifies plumbing and allows the use of just one pump

Easily changes the flow from filling to emptying

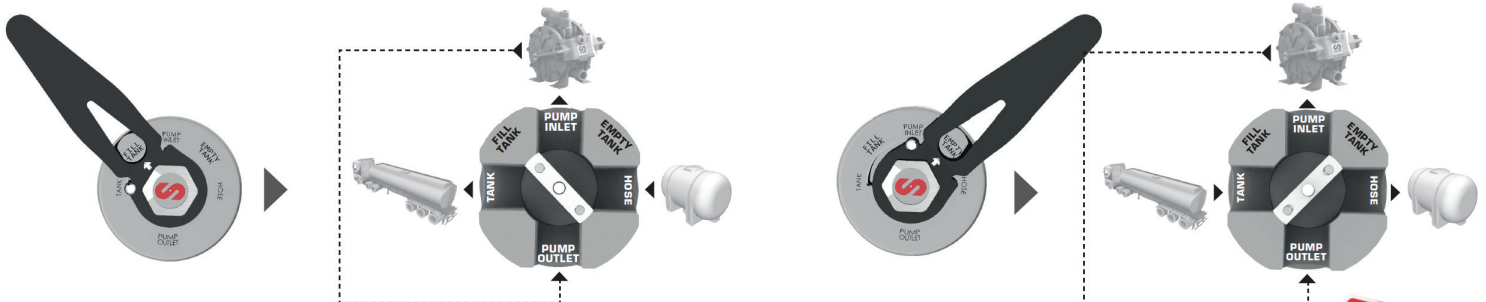

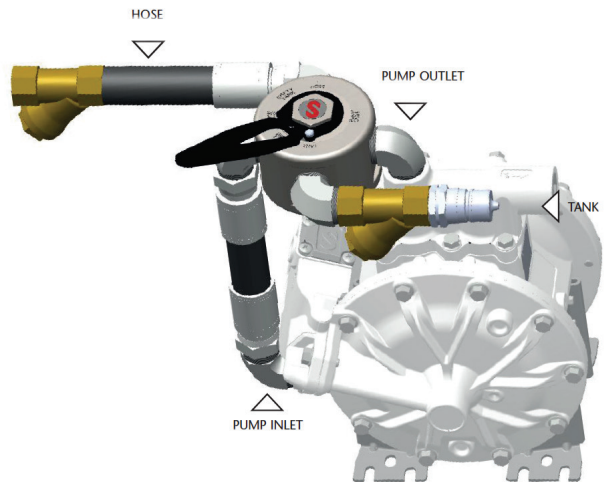

Designed and manufactured in Europe

Maximum working pressure of 217.5psi (15 bar)

4 x 1" BSP (f) threads

Dimensions of 110mm x 84mm

Weight of 1.7kg
